

Ad Store Feature Release

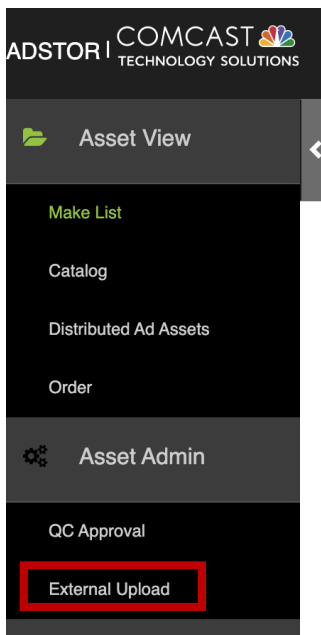

3.8.0 – External Upload Tool

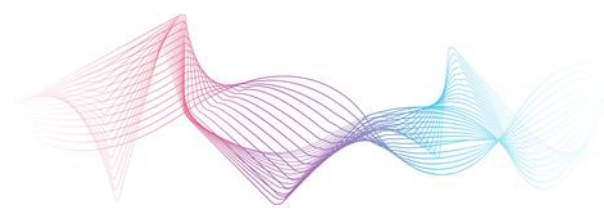

April 7th, 2021

This new feature allows our client base to safely and securely allow temporary access to the manual upload tool without having to create a new user. The possessor of the temporary URL registers their email and it is associated with the media they upload. This allows our Clients to track and communicate with the uploader if any issues arise from the media.

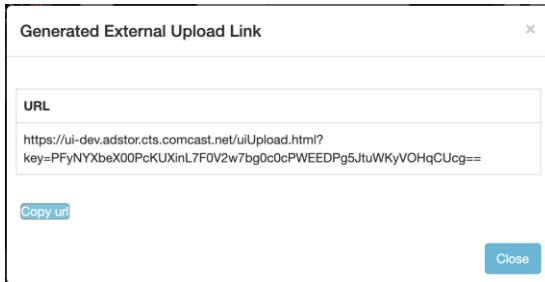

How to use it:

- a.) On the left navigation bar under Asset Admin there will be an External Upload option (for traffic manager profile and above)

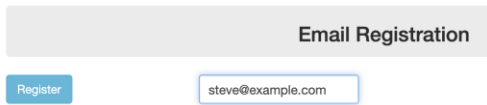

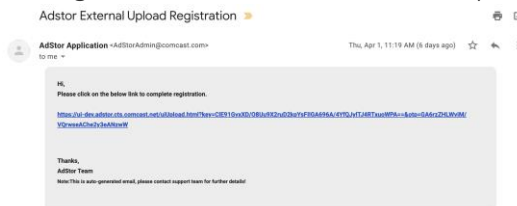

b.) Click on it will open a pop-up that generates a URL you will sent to the person you want to grant access to

c.) User possessing the URL will open it in a browser and enter their email address.

d.) Clicking on the confirmation email link will provide them direct access to the manual upload tool

NOTE: Once the browser is closed they will lose access to the upload. If they need frequent access you should consider creating them an account.
